

Index

Note: Page numbers followed by *f* indicate figures and *t* indicate tables.

A

Accessibility, 53

“Achieving Science with CubeSats”,
67–68

Acquisition of signal (AOS), 349

ADCS. *See* Attitude determination and
control system (ADCS)

Administrations and API/B publication,
398

Advanced algorithms, 218

Advanced coprocessors, 217

Advanced Exploration Systems (AES),
102–104

Advance publication information (API),
401–403

Aeolus, 112

Aerogravity assist (AGA) maneuvers,
45–46

AlamarBlue dye, 158–159

Alodine 1200, 403

Anodization, 422

Anomalies, 372–374

Antares/Minotaur, 432–434

Antennas, 229, 229–230*t*, 344, 403

AOS. *See* Acquisition of signal (AOS)

API. *See* Advance publication information
(API)

Applications, 54–55

Arizona State University’s Lunar Polar
Hydrogen Mapper (LunaH-Map),
75, 75*f*

Arsecond Space Telescope Enabling
Research in Astrophysics
(ASTERIA), 56–57, 76, 76*f*

Artemis 1, 85, 101–102

Assembly, integration, and verification
(AIV) activities, 404–405

Asteroid Impact and Deflection Assessment
(AIDA), 112–113

Asteroid Probe Experiment (APEX), 111

Asteroids, interplanetary missions, 106–107

Astrobiology, 147, 148–149*t*, 156–157

Astrodynamics

approaches, 35–36

definition, 35

interplanetary missions

ballistic capture, 47–48

dynamical effects, 44

gravity assist (GA) maneuvers, 44–46

high-altitude fly-bys, 46–47

hyperbolic manifolds, 48–50, 49*f*

Interplanetary Transport Network (ITN),
48–50

Lunar IceCube trajectory, 48*f*

resonant encounters, 46

weak stability boundaries, 47–48

perturbations, 36, 41–44

anomalies of the earth gravitational field,
42–43

atmospheric drag, 43–44

principles and laws

classical mechanics, 36

empirical, 36

energy and orbital period, 39

Keplerian elements, 39–40, 40*f*

orbit classification, 40–41

two-body problem, 37–38

Astronomy, 56–57, 58*t*

instruments, 76–79, 76*f*, 78*f*

Atlas V, 437–438, 439*t*

Atmospheric absorption, 347

Atmospheric chemistry instruments, 69

Atmospheric drag, 43–44

Atmospheric temperature and humidity
sounders, 70

Atomicity, consistency, isolation, and
durability (ACID), 211–212

Atomic oxygen, 171

Attitude determination and control system
(ADCS), 85–86, 95, 168–169, 169*f*,
200, 421

actuators

Attitude determination and control system
 (ADCS) (*Continued*)
 control momentum gyro, 268–269
 fluid dynamic actuator, 269
 magnetorquers, 269–270
 reaction wheels, 268
 spacecraft attitude, 270
 B-dot algorithm, 277–278
 classification, 270–274
 atmospheric resistance and
 aerodynamical ACS, 272
 flywheel, 273–274
 gravity field and gravity-gradient ACS,
 270–271
 magnetic field and magnetic ACS,
 271–272
 solar radiation pressure, 273
 spinning and spin stabilization,
 272–273
 Earth sensors, 266–267
 Global Navigation Satellite System
 (GNSS) -based attitude knowledge,
 267
 gyro, 267–268
 magnetic sensors, 265–266
 mathematical techniques
 Kalman filter, 276–277
 least mean squares algorithm, 275
 local methods, 274–275
 spin stabilization, 278
 star mappers/trackers, 266
 stellar gyro, 268
 Sun sensors, 265
 three-axis stabilization, 278–279
 Automation, 350, 369, 376
 Amazon Web Service (AWS) Ground
 Stations, 361–363

B

Backup ground station, 373
 Ballast mass, 425
 Basic input/output system (BIOS), 240
 Batteries, 307, 407
 Batch algorithms, 254–255
 B-dot algorithm, 277–278
 Beryllium, 403
 Biological CubeSat missions, 148–149*t*
 BioSentinel, 158, 159*f*

Bisat Observations of the Lunar Atmosphere
 above Swirls (BOLAS), 111
 Broadband infrared compact high-resolution
 exploration spectrometer (BIRCHES),
 72, 72*f*
 Busek BIT-3 systems, 292, 293*f*

C

Calibrated tools, 423
 California Institute of Technology (Cal Tech),
 101*f*
 California Polytechnic Institute (Cal Poly),
 353
 Cape Canaveral AFS, 438
 Carbon fiber-reinforced polymer (CFRP), 346
 Cataloged objects in space, 379, 380*f*
 CCB. *See* Common Core Booster (CCB)
 Center of mass (CM), 425–426
 Chariot to the Moons of Mars, 111
 Checkout after launch from Earth, 450
 Chemical propulsion system, 284, 288–291,
 298*t*
 Chemical thrusters, 289, 384–385
 ChipSats, 143, 181
 Circular polarization, 344
 Circular restricted three-body problem
 (CR3BP) model, 46–47
 Cislunar CubeSats, 101–106
 Clusters, 127
 CM. *See* Center of mass (CM)
 Coefficient of thermal expansion (CTE),
 420–421
 Cold case, 309–312, 312*t*
 Collinear libration points (CLPs), 48–50
 Collision avoidance, 408–410
 CommCubeSat1, 287–288
 chemical propulsion system sizing, 291,
 292*t*
 electric propulsion system sizing, 292, 294*t*
 Commercial ground station networks,
 361–363
 Commercial launch vehicles, 431
 Commercial off the shelf (COTS), 253, 283
 Commercial rotors, 346–347
 Commissioning, in-space operations,
 372–376
 human factors, 374–375
 life signs, 372–373

2U CubeSat, 354

3U CubeSat, 60, 73–74, 77, 98–99, 137, 143, 274, 303–304, 304*t*, 384, 448–450

6U CubeSat, 70–75, 78–79, 90–91, 94, 99–100, 102–104, 106, 158, 310

3U HARP CubeSat mission, 74

UHF bands, 344, 354–356

UniSat-5, 179

United Nations Committee on the Peaceful Uses of Outer Space (UNCOPUOS), 392

University ground station networks, 357–359

University of Rome (La Sapienza), 178–179

University of Toronto's CanX-4&5 mission, 74

UN Office on Outer Space Affairs (UNOOSA), 392

Unscented Kalman filter (UKF), 255

US Combined Space Operations Center (CSpOC), 409

User segment access, 342

US Space Surveillance Network (USSSN), 379

UV degradation, 171

UV/Vis/IR telescopes, 76

V

Vacuum conditions, 171

Vandenberg AFB, 438

Vehicle to dispenser integration, 427–428

Venting, CubeSat, 428

Venus, 87–88, 108–109, 109*f*

Vertically aligned carbon nanotubes (VACNTs), 71

VHF bands, 344, 354–356

Vibration test, 450

Virginia Commercial Space Flight Authority (VCSFA), 181

Virginia Space and program, 181

Visible spectral imager for occultation and nightglow (VISION) instrument, 69

V ∞ leveraging maneuver (VILM), 46

VMMO, 114–115, 115*f*

Voice-operated exchange (VOX) switch, 345

W

Wallops Flight Facility (WFF), 434

Waste heat, 306

Weak stability boundary (WSB), 47–48

WFF. *See* Wallops Flight Facility (WFF)

Windform XT 2.0, 176–177, 176*f*

WREN, 179–180

X

Xatcobeo, 247

X band, 354, 355*f*

Y

Yagi-Uda antennas, 346
